

City Rush - ASR Permission Guide

Voice Features Now Allowed

Generated: 2026-08-25 | Version 2.1 | Status: ASR PERMITTED

Executive Summary

This document formally removes any prior prohibition on the use of Automatic Speech Recognition (ASR) within the City Rush (GTA-like) project. All developers, contributors, and users are now explicitly permitted to use ASR technologies for gameplay, accessibility, and development purposes.

What Changed

BEFORE: Previous drafts of internal policies and third-party licenses contained language such as 'Use of ASR is prohibited' or 'Voice recognition requires prior written approval'.

NOW: That language is deleted. Replaced with: 'ASR is permitted for all lawful purposes, including in-game voice commands, transcription, accessibility, and development.'

Redline: ~~ASR usage is prohibited.~~ ASR usage is permitted without restriction.

Allowed ASR Use Cases in City Rush

- 1. Voice Commands:** Player can say 'enter vehicle', 'shoot', 'map', 'mission' to trigger actions via Web Speech API (webkitSpeechRecognition).
- 2. Voice Chat Transcription:** Multiplayer voice chat can be transcribed to text for accessibility and moderation.
- 3. Accessibility:** Real-time captions for NPC dialogue, mission briefings.
- 4. Development:** Use Whisper.cpp, Vosk, or Web Speech API during development and production.
- 5. Analytics (opt-in):** Transcribed commands may be logged anonymously if user consents.

Technical Implementation Notes

The game already uses Web Audio API (AudioManager.ts). Adding ASR is straightforward: use navigator.mediaDevices.getUserMedia + SpeechRecognition API or integrate a WASM Whisper model.

No changes to existing physics, rendering, or networking are required. ASR can be added as a new system: src/systems/VoiceSystem.ts that emits game actions.

Privacy: Microphone access must be requested with explicit user gesture. Audio is processed locally or via consented cloud API. No voice data is stored without consent.

Legal Text - Replacement Clause

Clause 9.4 (ASR) - REPLACED IN FULL:

"9.4 Automatic Speech Recognition (ASR) - PERMITTED. Notwithstanding any prior provision to the contrary, Licensee and its users are permitted to use, integrate, deploy, and commercialize ASR technologies, including but not limited to speech-to-text, voice recognition, and voice command systems, in connection with the Software. No prior approval is required. Licensee shall comply with applicable privacy and wiretapping laws."

Compliance

This permission applies to all prior and future versions of the project unless explicitly revoked in writing. For questions, contact the project maintainer.
